Meeting Notes

10/14 & 10/17

On Tuesday we attempted an install of vSMP foundation free software on the server via a USB stick. I registered an account on the ScaleMP site and reviewed some of the attached documentation. The install required Infiniband (still waiting) and the installation froze on the step "Initializing the Backplane". The meeting mainly consisted of discussing and reviewing ScaleMP resource material and viewing various forums. It took a while to get approval for the download of the software and prepping so it mainly consisted of the research portion.

Friday's meeting consisted of more research and creating the slideshow for Wednesday's presentation as well as determining who says what and when. Overall, it was a productive week of research and preparing.

The next steps are to get the VM's up and running to create the testbed before the actual implementation next semester.
